

		electric force upwards. Hence Q will accelerate upwards.
19	B	$E = -\frac{\Delta V}{\Delta x}$ Define positive as P to Q. At regions around 0.040 m, $E = -\frac{14 - 15}{0.050 - 0.030} = 50 \text{ V m}^{-1}$ Hence, the electric field is 50 V m⁻¹ towards Q.
20	B	Using $I = Anvq$
