

		Hence, the electric field is 50 V m ⁻¹ towards Q.
20	B	Using $I = Anvq$, $v = \frac{I}{Anq} = \frac{I}{A} \times \frac{1}{nq}$ Hence, current per unit of cross-sectional area, $\frac{I}{A}$ is required.

Qn	Ans	Suggested Solution
21	D	Due to the high resistance of voltmeter, negligible current flows through it. Regardless of
