

		$\approx 23 \text{ W}$
27	A	Using $E = \frac{p^2}{2m}$, since electrons are accelerated from rest through p.d. V, $eV = E$ $= \frac{p^2}{2m}$ With $p = \frac{h}{\lambda}$, $eV = \frac{1}{2m} \frac{h^2}{\lambda^2}$ $\Rightarrow \lambda \propto \frac{1}{\sqrt{V}}$
28	C	Since $\Delta E = hf$ from the energy level diagram the energy difference between emitted
