

|    |   |                                                                                                                                                                                                                                                            |
|----|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    |   | $\rightarrow \lambda \propto \frac{1}{\sqrt{V}}$                                                                                                                                                                                                           |
| 28 | C | <p>Since <math>\Delta E = hf</math> , from the energy level diagram, the energy difference between emitted photons is lesser at higher frequencies.</p> <p>Wavelength is inversely proportional to frequency, hence the spectrum is in opposite order.</p> |
| 29 | A | The deflection of $\alpha$ -particles through very large angles imply that they have struck                                                                                                                                                                |
