

- 5 A door is made up of a uniform pane of mass 20 kg. The pane is 0.50 m wide and 0.50 m high and is freely hinged at the top and bottom as shown. A cable attached to the top right corner of the pane makes an angle of 30° with the top of the pane and has a tension of 150 N.

What is the magnitude and direction of the horizontal force exerted by the top hinge on the pane?

- A 110 N to the left
 - B 300 N to the left
 - C 110 N to the right
 - D 300 N to the right
- 6 A uniform sphere of weight 15 N is placed in between two smooth planes as shown
