

2 (a)

$$a = \frac{v - u}{t}$$

$$t = \frac{v - u}{a}$$

$$s = \frac{u + v}{2} t$$

$$s = \frac{v + u}{2} \left(\frac{v - u}{a} \right)$$

$$v^2 = u^2 + 2as$$

- (b) (i)** H is a horizontal straight line. V is a straight line passing through origin with positive gradient
- (ii)** Correct shape (Parabola), initial gradient is zero
- (iii)** Ball has a small diameter and falls from a low height
