

26	A sinusoidal current is represented by the equation $I = I_o \sin (\omega t)$ Which equation represents the sinusoidal current with both its period and amplitude doubled?	
	A	$2I = I_o \sin (2 \omega t)$
	B	$I = 2I_o \sin (2 \omega t)$
	C	$I = \frac{1}{2} I_o \sin (2 \omega t)$
	D	$I = 2I_o \sin (\frac{1}{2} \omega t)$

Answer: D

I_o is the amplitude and ω is the angular frequency.

With double the period, it means half the angular frequency.
