

- 15** A buoy floating on the sea is observed to be oscillating in simple harmonic motion due to the motion of the waves. It can reach a maximum of 0.50 m above the sea level and makes 5 complete oscillation per minute.

What is the time taken for it to move from a position that is 0.50 m above the sea level to a position that is 0.25 m below the sea level?

- A** 4.5 s **B** 5.0 s **C** 7.0 s **D** 8.0 s
