

- 6** A 1.5 kg ball is initially traveling at a constant speed of 2.5 m s^{-1} . A force is exerted on the ball resulting in the acceleration as shown below. The acceleration is opposite in direction to the initial speed of the ball.

What is the impulse of the ball after 4.0 s?

- A** 4.0 N s **B** 8.0 N s **C** 12 N s **D** 16 N s
