

It is independent of the depth of the object as upthrust balances from the pressure difference between the top and bottom of the object.

9

A

By COE,
Gain in KE = Loss in GPE

KE just before ball strikes surface = initial GPE
 $KE_1 = mgh_1$ --- (1)

KE just after ball strikes surface = final GPE
 $KE_2 = mgh_2$ --- (2)

Taking the bottom of the ball as reference,
(2)/(1): $KE_2 = h_2 / h_1 (KE_1)$
 $= 30/70 \times 0.80 = 0.34 \text{ J (2sf)}$
