

1	
(a)	Point where the <u>weight / gravitational force appears</u> to act through.
(b)	F_1 and F_2 are frictional forces.
	They arise because the <u>tyres</u> exert a <u>force</u> backwards on the <u>ground</u> .
(c)	Taking moments about the bottom of the front wheels,
	Sum of clockwise moments = sum of anticlockwise moments $(R_2 \times 5.0) + (T \sin 30^\circ \times 5.0) = (T \cos 30^\circ \times 1.0) + (W \times 2.0)$ $(R_2 \times 5.0) + (7000 \sin 30^\circ \times 5.0) = (7000 \cos 30^\circ \times 1.0) + (20000 \times 2.0)$
	$R_2 = 5710 \text{ N (3sf)}$
(d)	Sum of forces vertically = 0 $R_1 + R_2 + T \sin 30^\circ = W$ $R_1 + 5710 + 7000 \sin 30^\circ = 20000$
	$R_1 = 10800 \text{ N (3sf)}$
