

Using violet light will decrease $\phi_{\min}$, hence allowing ϕ to be larger than $\phi_{\min}$.

21

B

Since electric force, $F = qE$

where F is the electric force on charge q

q is the charge in the electric field

E is the electric field strength at that point due to some other charge

Hence, the electric field strength due to q at position of charge $Q = F/Q$.

22

D
