

		T varies linearly with r and upon extrapolation, will pass through the origin.
14	C	For each body, $\frac{GM}{s^2} = M \left(\frac{s}{2}\right) \omega^2 = M \left(\frac{s}{2}\right) \left(\frac{2\pi}{T}\right)^2$ $T^2 = \frac{2\pi^2 s^3}{GM}$
15	P	1 2 (GM)
