

18	A	By $\omega^2 = \frac{k}{m}$, period is independent of initial displacement. Initial total energy = max K.E. = $\frac{1}{2}m\omega^2 A^2 = E$ final total energy = max K.E. = $\frac{1}{8}m\omega^2 A^2 = E/4$
19	C	When there is more damping, the peak of frequency response curve will shift left
