

		Voltmeter reading for Fig. c = $(1.0)(1.2) = E - I r = 1.5 - (1.0)(0.3) = 1.2 \text{ V}$
25	C	Since the charges at X and Y are equal and opposite, the magnitude of the electric field between X and Y is smallest at the middle and increases towards X and Y.
26	D	Magnetic force acting on PS or QR = $F_B = NBIl = 10(0.80)(4.0)(0.20) = 6.4 \text{ N}$
