

27	B	Change in flux linking the circuit when coil moves away $\Delta\Phi = NBA = (50)(0.25)(2 \times 10^{-4}) = 2.5 \times 10^{-3} \text{ Wb}$ Charge passing through the galvanometer $Q = I \times \Delta t = \frac{V}{R} \times \Delta t = \left(\frac{\Delta\Phi}{\Delta t} \right) \left(\frac{1}{R} \right) \times \Delta t = \frac{\Delta\Phi}{R} = \frac{2.5 \times 10^{-3}}{100} = 2.5 \times 10^{-5} \text{ C}$
28	A	For half a cycle, total resistance is R
