

5	D	By Newton's 3 rd Law, the 2 forces are an action-reaction pair
6	B	Change in momentum of one bullet, $\Delta p = mv - (-mv) = 2mv = (2)(2 \times 10^{-3})(300) = 1.2 \text{ N s}^{-1}$ By Newton's 2nd Law, average force exerted by body of tank on stream of bullets, $\langle F \rangle = (N / t) \times \Delta p = (300 / 60) \times 1.2 = 6 \text{ N}$ By Newton's 3rd Law, average force exerted by the stream of bullets on body of the tank = 6 N.
7	B	When the man is carrying the large rock, more water is displaced than that when the rock
