

24	B	$Bqv = \frac{mv^2}{r}$ $Bq = \frac{mv}{r} = \frac{m(r\omega)}{r} = m\left(\frac{2\pi}{T}\right)$ $Bq = \frac{2\pi m}{T}$ This shows that the period is only dependent on B, q and m. independent of v.
25	C	$\text{Flux linkage} = NBA = 8(B)(A/4) = 2BA$
