

direction as the external field.

28 Ans: B

On the secondary side, $I_{S rms} = \frac{\langle P \rangle}{V_{S rms}} = \frac{12}{6.5} = 1.8462 A$

There using $\frac{I_P}{I_S} = \frac{N_S}{N_P}$

$$I_{P rms} = \frac{40}{1000} \times 1.8462 = 0.0738 = 0.074 A$$
