

6 (a) 1.	vibration / oscillation <u>parallel</u> to energy transmission / wave	[1]
2.	vibration / oscillation <u>perpendicular</u> to energy transmission / wave energy transferred (in at least one case)	[1]
(b)(i)	$7.98(t - 170) = 4.75t$ $t = 420 \text{ s}$ OR $7.98t = 4.75(t + 170)$ $t = 250 \text{ s}$ $250\text{s} + 170\text{s} = 420\text{s}$ 7.0 min	[1] [1]
(ii)	$420 \times 4.75 = 1995 \text{ km}$	[1]

(c)(i)	(From Fig 6.3) S-wave <u>velocity</u> is 0/ has no velocity in <u>outer core (and inner core)/ from a depth of 3000km to the center of the Earth</u> S-waves <u>cannot travel through</u> (outer) core Because the (outer) <u>core is liquid/ S-waves cannot travel though liquid</u>	[1] [1] [1]
(ii)	These regions are <u>opposite</u> to the epicenter/earthquake	[1]
(d)(i)	Speed <u>increases</u> Because (<i>any 2 from</i>): <u>temperature</u> increases; <u>density</u> increases; <u>elastic moduli</u> increases; <u>pressure</u> increases;	[1] [2]
(ii)	path curves OR refracted away from centre of earth OR towards surface	[1] [1]
(e)(i)	waves that just enter the outer core and those that just scrape/curve across its surface (are travelling/separated/ "bent"/"curved" in opposite directions as seen in Fig 6.4 in part of the question and the " diagram with the angles") leads to a gap/"region where no seismic waves are detected" between these two positions	[1] [1]
(ii) 1. 2.	(From Fig 6.3), Radius of Earth = 6500 km (accept: 6250 km to 6750 km) {do not accept: 6000 km} (From Fig 6.4), $\Delta \theta$ from the centre of the Earth = $143^\circ - 103^\circ$ = 40° = 0.698 rad $s = r(\Delta \theta) = (6250 \text{ km to } 6750 \text{ km})(0.698)$ = 4360 to 4710 km (or 4000 to 5000 km)(1 sf)	[1] [1] [1]
(f)	Any one from the following, from any "category": social: locate earthquakes locate landslides warn about tsunamis / volcanoes rush assistance quickly identify archaeological sites save lives / evacuate area academic curiosity identify erosion technological: design buildings that resist earthquakes	[1]

	locate gas / oil reserves locate mineral reserves locate water locate sunken treasure / aeroplane Black boxes / oil tanks predict / understand earthquakes / tsunamis / volcanoes economic: cheaper resources no need to replace destroyed buildings discover contamination
