

direction so S experiences another force away from Q. Resultant force is downwards.

24 A $F_B = N \times (BIL \sin\theta) = 100 \times 0.55 \times 1.6 \times 0.1$
 $= 8.8 \text{ N}$

$$\text{Torque} = 8.8 \times 0.05$$
$$= 0.44 \text{ N m}$$

Using FLHR, direction of force on right edge is moving into the plane of paper.

25 A
Let PQ be a straight conductor:
