

	are used.
14.	Ans: D $d \sin \theta = n \lambda$ $d \sin (180-155) = 1 \lambda$ $d \sin \theta_2 = 2 \lambda$ solving simultaneously, $\theta_2 = 58^\circ$ Second order maxima would be observed at $(180 + 58)^\circ = 238^\circ$
15.	Ans: B Rayleigh's criterion: minimum angle for images to be just resolved $\theta = \lambda/b$
