

	thermistor is high. The heater should be connected across the thermistor.
24.	Ans: B Using right-hand grip rule, the clockwise current in the coil generates a magnetic flux density directed into the page in the region of the centre of the coil. Using Fleming's left hand rule, with conventional current of the electron flow directed downwards and magnetic flux density directed into the page, the electron experiences a rightwards force.
25.	Ans: D clockwise moment about blades = anticlockwise moment about blades
