

	Homogeneous equation refer to one where all the terms in the equation has consistent (same) units. The terms in this equation are P , Q and RS .
3.	Ans: B From $t = 0$s to point B, the object has always been accelerating in the same direction (negative direction). So its velocity will continuously get more and more negative. However, beyond B, the acceleration is positive and the velocity will get less negative and decreases in magnitude.
4.	Ans: A
