

	44 cm mark on the rule.
7.	Ans: C $\text{Rate of energy loss} = \frac{mgh}{t} = mgv$ A: Kinetic energy is constant since speed is constant. B: Mechanical energy is not constant. The ball is losing gravitational potential energy. D: Total resistive force cannot be zero; it is constant. * However, the resultant force is zero since at terminal velocity, acceleration is zero.
8.	Ans: B
