

graph.

26. Ans: B

Find induced current:

$$I = \frac{\mathcal{E}}{R} = \frac{\Delta\Phi}{\Delta t} \left(\frac{1}{R} \right) = \frac{4.0 \times 10^{-5}}{5.0} \left(\frac{1}{2.0} \right) = 4.0 \times 10^{-6} \text{ A}$$

Since the flux linkage is increasing and pointing to the right, the induced current will produce a flux pointing to the left.

Using right hand grip rule, the induced current flows in the clockwise direction when viewed from the right side of the ring.
