

		Torque due to $F = F \times 1.40 = (0.25)(9.81) \text{ m}$ $F/m = (0.25)(9.81)/1.40 = 1.75$
7	A	GPE increases linearly with displacement. EPE starts later, increases with extension squared (parabolic upwards). KE decreases linearly with displacement at first (vs GPE), then decreases at greater and greater rate due to increasing EPE.
8	A	Power supplied $P = \frac{mgh}{t} = mav$
