

11.	C	At constant speed, Driving force on boat = Total frictional drag $\times$ $P = F v = XS$
12	A	At constant speed, driving force = total frictional drag $\therefore P = F v = XS$ At constant speed, kinetic energy = $\frac{1}{2}mv^2$ At constant speed, power = $\frac{dE}{dt} = \frac{1}{2}m \frac{dv^2}{dt}$ $\therefore P = \frac{1}{2}m \frac{dv^2}{dt}$
