

		shift the balance point towards X.
25	C	Currents in X and Y are in the same direction. X and Y will experience attractive force towards each other (i.e. force on Y is towards X). Currents in Y and Z are in opposite directions. Y and Z will experience repulsive force away from each other (i.e. force on Y is away from Z towards X). Resultant force is towards X.
26	D	Faraday's Law, the e.m.f. induced in the coil of wire rotating in a magnetic
