

		$\langle \mu \rangle = \frac{1}{2} \lambda (V_{\text{peak}} / R)$
28.	C	Work done of electrons = energy of x-ray photons emitted (For max photon energy) $eV = hf = hc/\lambda$ λ inversely proportional to potential difference When V is doubled, λ is halved.
29.	D	Background = 5 s^{-1} : Actual Count rate $C = 20 - 5 = 15 \text{ s}^{-1}$
