

15 When a volatile liquid evaporates it cools down.

What is the reason for this cooling?

- A** All the molecules slow down.
- B** Fast molecules leave the surface so the mean speed of those left behind is reduced.
- C** Molecular collisions result in loss of kinetic energy of the molecules.
- D** The molecules collide with one another less frequently.

Ans B

16 The molecules of an ideal gas at thermodynamic temperature T have a root-mean-square
