

- 17** Which one of the following statements about the electric potential at a point is correct?
- A** The potential is given by the rate of change of electric field strength with distance.
 - B** The potential is equal to the work done per unit positive charge in moving a small point charge from infinity to that point.
 - C** Two points in an electric field are at the same potential when a small positive charge placed along the line joining them remains stationary.
 - D** An alternative unit for electric potential is V m^{-1} .

Ans: B

18 The electric potential V varies as $1/d$ at distance d from P along a line PQ .
