

- 15 The compressions and rarefactions of a sound wave travelling in air in the positive x -direction are shown below.

Which statement is true about the diagram?

- A At P , the air pressure is minimum.
- B At Q , it is a position of antinode.
- C At Q , the air molecule is momentarily at rest.
- D** At P , the air molecule is moving in the positive x -direction.

- 16 The two lowest frequencies at which an open narrow tube resonates are 256 Hz and 512 Hz. If
