

- 24 A small circular coil lies inside a large coil. The two coils are horizontal and concentric. The large coil carries a constant clockwise current.

The smaller coil is pulled perpendicular out of the plane of the paper. Which of the following describes the direction of the induced current in the smaller coil and the resultant force between the coils?

	Induced current	Force between coils
A	Clockwise	Attraction
B	Clockwise	Repulsion
C	Anticlockwise	Attraction
D	Anticlockwise	Repulsion

- 25 An alternating voltage of 230 V is supplied to a transformer, which steps the voltage down to a
