

- Answer: C
- 2** The displacement is determined from the area underneath the graph. The point where the area underneath the graph is the largest is A.

This means that the body is moving towards the starting position from A to C, and then away from the starting position from C to D.

Answer: A

- 2** Let $F = 5 \text{ kN} = (5)(10^3) = 50 \text{ N}$
