

No.	Solution	Remarks
1(a)	The work done by a force on an object particle is defined as the product of the magnitude of the force and the component of the displacement in the direction of the force.	
(b)(i)	Change in KE = Net work done $0 - \frac{1}{2}mu^2 = -\frac{1}{2}F_{\max}x$ $(0.400)(2.5)^2 = (14)x$ $x = 0.18 \text{ m}$	
(ii)	work done by F / J 	
(iii)	power / W 	

No.	Solution	Remarks
2(c)	Body is moving in a circle/circular arc. The velocity is
