

	period ($0.50 \text{ s} / 2 = 0.25 \text{ s}$)
15	Answer: B decrease f, λ increases so more diffraction distractor C: student mixed up $v = f\lambda$ decrease v, f constant, λ will decrease so less diffraction. distractor D: student may mistake larger amplitude for larger λ distractor A: decrease density, decrease speed of waves in water, same as C.
16	Answer: C
