

	$= (0.5 \times 10^{-18}) \left(\frac{1.00 \times 10^{-18}}{2.0 \times 10^{-18}} - \frac{0.5 \times 10^{-18}}{0.5 \times 10^{-18}} \right)$ $= 2.5 \text{ A}$
19	Answer: B Suspended, no net force, $F_E = F_G$ $qE = mg$ $q \frac{\Delta V}{\text{seperation}} = mg$ $V - 0 = \frac{mg(2d)}{q}$ D: if students use electric potential equation C: students think $F_E = qV$ A: memorisation of V/d without considering d is separation
20	Answer: D
