

	$\lambda = 0.544 \text{ m}$
7	Answer: C When rocket is moving horizontally at constant speed, Thrust force $F = \text{Drag force}$ $P = Fv$ $28000 = 760v$ $v = 36.84 \text{ m s}^{-1}$ When rocket is moving vertically at constant speed, Thrust force $F = \text{Drag force} + \text{Weight of rocket}$ $= 760 + (90)(9.81) = 1642.9 \text{ N}$ $P = Fv = (1642.9)(36.84) = 60.5 \text{ kW}$
8	Answer: A
