

- 10** Which one of the following statements is true about gravitational potential energy, electric potential energy and elastic potential energy?
- A** Gravitational force and elastic force always points in the direction of decreasing potential energy but whether electric force will point towards increasing or decreasing potential energy depends on whether it is a positive or negative charge.
 - B** Zero gravitational potential energy and zero electric potential energy is the smallest possible potential energy in a given system of 2 masses and 2 negative charges respectively.
 - C** The magnitude of the potential energy can be found using the gradient of the force-displacement graph.
 - D** These potential energies are energies stored in the body due to its position or the arrangement of its component parts.

Ans : D

By definition of potential energy.

11 Sand is sprinkled on a turntable on points X and Y . The turntable is rotating with increasing
