

- 26 A voltmeter reads 80 V when measuring the potential difference across a load of $10\ \Omega$ connected to a sinusoidal power source with frequency 888 Hz.

What is the peak power dissipated by the load when the frequency is $1/3$ of its original?

- A 640 W B 850 W C 1280 W D 2560 W

Ans: D

$$\frac{(V_{rms} \times 2)^2}{R} = (80 \times 2)^2 / 10 = 2560$$

A: $\frac{V_{rms}^2}{R}$

B: $\frac{(V_{rms} \times 2)^2}{3R}$

C: $\frac{(V_{rms} \sqrt{2})^2}{R}$

27 The graph below shows the variation of X-ray intensity with wavelength emitted from an
