

So time taken should be $\frac{1}{2} t = 1/2t$

15 B

Initially axis of polarization is 90° to polarized light, so zero light transmitted

Resolve A with respect to new polarization axis. It is $A \cos 60^\circ = 0.50 A$

When polaroid is rotated 30° , the two axes are now 60° to each other.

16 C
