

projectile motion. Its horizontal velocity component is constant and L remains constant.

- 25 C** The output voltage is $240/20 = 12 \text{ V}$, and output current is $12/5 \text{ A}$.
Output power = $V \times I = 12 \times 12/5 = 28.8$, which is 0.95 of the input power.
 $0.95 \times 240 \text{ W} = 228$
 $I = 0.126 \text{ A}$

26 A $\langle P \rangle = V_{\text{eff}}^2 / R$
