

13 C

From the graph, period of oscillation, $T = 2.0\text{s}$

Maximum velocity, $V_{\text{max}} = \omega x_0$, where x_0 is the amplitude of the oscillation.

$$= \frac{2\pi}{T} x_0 = \frac{2\pi}{2.0} (3.0 \times 10^{-2}) = 0.094 \text{ ms}^{-1}$$
