

$$= 2.4 \times 10^{-4} \text{ W}$$

15 A

The wave takes 4 s to go from P to Q.

Look at the graph for P, at $t = 0$, for example. It starts from 0, and becomes more positive as time progresses.

So for Q, the same thing should happen at $t = 4$ s.

Looking at the 4 options, only A satisfies this requirement.
