

	Solving (1) & (2), $a = 0.75 \text{ m s}^{-2}$	
4	B Initial vertical velocities for both stones, $u_y = 0$ $s_y = u_y t + \frac{1}{2} g t^2 = \frac{1}{2} g t^2$ Both stones will take the same time to fall through the same height since they experience the same gravitational acceleration g.	E
5	B	A
