

	hence option D is not correct.	
9	C Distance moved in $60^\circ = 0.40 \times \frac{60}{360}(2\pi) = 0.4189 \text{ m}$ Since both masses were displaced vertically by 0.4187, the net increase in total GPE of the weights = $m g h = (20 - 15) / 9.81 \times 9.81 \times 0.4189$ $= 2.1 \text{ J}$	D
10	C	D
