

1	A man of mass 75.2 kg uses a set of weighing scales to measure his mass three times. He obtains the following readings. <table data-bbox="663 298 1026 562"> <tr> <th></th><th>mass / kg</th></tr> <tr> <td>reading 1</td><td>80.2</td></tr> <tr> <td>reading 2</td><td>80.1</td></tr> <tr> <td>reading 2</td><td>80.2</td></tr> </table> Which statement describes the precision and accuracy of the weighing scales?		mass / kg	reading 1	80.2	reading 2	80.1	reading 2	80.2
	mass / kg								
reading 1	80.2								
reading 2	80.1								
reading 2	80.2								
	<table border="1"> <tr> <td>A</td> <td>not precise to ± 0.1 kg and accurate to ± 0.1 kg</td> </tr> </table>	A	not precise to ± 0.1 kg and accurate to ± 0.1 kg						
A	not precise to ± 0.1 kg and accurate to ± 0.1 kg								
	<table border="1"> <tr> <td>B</td> <td>not precise to ± 0.1 kg and not accurate to ± 0.1 kg</td> </tr> </table>	B	not precise to ± 0.1 kg and not accurate to ± 0.1 kg						
B	not precise to ± 0.1 kg and not accurate to ± 0.1 kg								
	<table border="1"> <tr> <td>C</td> <td>precise to ± 0.1 kg and accurate to ± 0.1 kg</td> </tr> </table>	C	precise to ± 0.1 kg and accurate to ± 0.1 kg						
C	precise to ± 0.1 kg and accurate to ± 0.1 kg								
	<table border="1"> <tr> <td>D</td> <td>precise to ± 0.1 kg and not accurate to ± 0.1 kg</td> </tr> </table>	D	precise to ± 0.1 kg and not accurate to ± 0.1 kg						
D	precise to ± 0.1 kg and not accurate to ± 0.1 kg								
	Answer: D Since the weighing scale's reading is about 5 kg away from the man's true mass, the scale reading is not accurate. However, repeated readings are close to one another with 0.1 kg deviation. Hence the readings are precise.
