

30	The half-life of a certain radioactive isotope is 32 hours. What fraction of a sample would remain after 16 hours?							
	A	0.25	B	0.29	C	0.5	D	0.71
	Answer: D Using $x = x_0 \left(\frac{1}{2} \right)^n$ Since 16 hours is 0.5 half-life, $x = x_0 \left(\frac{1}{2} \right)^{0.5} = 0.7071x_0 = 0.71x_0$
