

6

An object moves along a frictionless track from A to C, through B, which is the lowest point of the motion.

Which graph shows how the kinetic energy of the object varies with the vertical distance from A?

A**B****C****D**

Solution: B

The gravitational potential energy will decrease linearly with the vertical distance from A since the change in GPE = $mg\Delta h$

The kinetic energy will increase at the same linear rate, and therefore, the answer is B.
